

## Enterprise Data Warehouse: Procurement

This proposal seeks to incorporate and integrate procurement data into the Enterprise Data Warehouse. In so doing, campus administrators would realize significant savings and efficiencies as well as improved data accuracy, reliability and security.

---

### Summary

The University's Institutional Data Management and Governance (IDMG) initiative has made significant progress in growing its EDW and Business Intelligence (BI) solutions over the past year. Its goal: to make institutional data easily accessible, reliable, consistent, and secure to support informed planning, decision-making, and communication. In building on its momentum, it is seeking funding to integrate procurement data.

This proposal would add purchase order, voucher, invoice, and payment detail data into the EDW. New OBIEE Cal Answers reports and dashboards would help faculty and staff better track and monitor the purchasing cycle, analyze purchasing practices and efficiencies, and reclassify spend data for improved analysis and procurement cost savings.

This investment in the continued expansion of the EDW will help eliminate inefficient operations, poor decisions, inaccurate publication of data, lost opportunities, continued maintenance of redundant shadow systems, and increased risk of data loss and theft.

---

### Delivering the Vision

Adding procurement data into the EDW will help achieve the vision of Operational Excellence by reducing administrative costs, advancing an effective and efficient operating environment, and instilling a culture of continuous improvement that leads to high-quality performance and outcomes. This proposal seeks one-time OE funding of \$1,567,000 and projects annual savings of \$6,631,700.

---

### Timeline

If approved by the Executive Committee, this effort would be implemented in 15 months from funding approval.
